

Construction Valuation Determination

Information Bulletin
No. IB-033
Effective: January 1, 2019
By: Chief Building Official
For Public Use

City of Concord • Community and Economic Development • 1950 Parkside Drive, MS/51 • Concord, CA 94519 • (925) 671-3107 • Fax (925) 680-4877

The “Construction Cost” for building permits shall be determined by the following steps:

1. Applicant to provide estimated cost of construction for all permit work including materials and labor.
 - a. If the owner is performing the permit work on their own, estimates for standard labor costs must still be included in the total estimated cost.
 - b. Work that does not require a permit, such as paint, flooring, etc. does not need to be included in the estimated cost of construction.
2. If the Building Official or designated staff determines the estimated cost to be too low, they can require any of the following options:

Option 1: For remodels, repairs or alterations, the Building Official or designated staff may provide a reasonable cost of their own estimation. If the applicant contests this estimate, they may follow Option 3.

Option 2: For new construction or additions, the Building Official or designated staff may estimate the construction cost by using construction cost values published by the International Code Council (ICC) and RSMeans. The calculation shall be as follows:

Construction Cost = (Square feet of construction) x (ICC Square Foot Construction Costs₁) x (RSMeans City Cost Index Factor₂)

Option 3: Applicant to provide an official itemized bid from a contractor which includes a clear breakdown of costs and scope of work that matches the permit work.

Footnotes:

1. See Attachment 1. ICC Building Valuation Tables are provided at: <https://www.iccsafe.org/codes-tech-support/codes/code-development-process/building-valuation-data/>
2. See Attachment 2. RSMeans City Cost Index Factor = (Current year City Cost Index for Oakland, CA / 100). Cost Index Factors are provided at <https://www.rsmeans.com/products/books/cost-books/building-construction-costs-book.aspx>

Important Points

- The BVD is not intended to apply to alterations or repairs to existing buildings. Because the scope of alterations or repairs to an existing building varies so greatly, the Square Foot Construction Costs table does not reflect accurate values for that purpose. However, the Square Foot Construction Costs table can be used to determine the cost of an addition that is basically a stand-alone building which happens to be attached to an existing building. In the case of such additions, the only alterations to the existing building would involve the attachment of the addition to the existing building and the openings between the addition and the existing building.
- For purposes of establishing the Permit Fee Multiplier, the estimated total annual construction value for a given time period (1 year) is the sum of each building's value (Gross Area x Square Foot Construction Cost) for that time period (e.g., 1 year).
- The Square Foot Construction Cost does not include the price of the land on which the building is built. The Square Foot Construction Cost takes into account everything from foundation work to the roof structure and coverings but does not include the price of the land. The cost of the land does not affect the cost of related code enforcement activities and is not included in the Square Foot Construction Cost.

Square Foot Construction Costs ^{a, b, c}
